House rules for trade fair exhibitors at the Artfusion Expo

Dear exhibitors,

in order to ensure that the trade fair runs smoothly and safely, we ask you to strictly adhere to the following rules.

1. Smoking ban

Smoking is strictly prohibited throughout the entire exhibition hall, especially at the stands. Please use the designated smoking areas outside the building.

2. Music and audio playback

Playing music or other audio files that are subject to GEMA is not permitted at the stands. If you do use music, you must ensure that it is GEMA-free or can provide proof of a corresponding license.

3. Ban on kitchen appliances and power-intensive devices

For safety reasons, the use of kitchen appliances and all devices that cause a high power load is prohibited. This includes, among other things, kettles, coffee machines, microwaves and other electrical devices that go beyond normal stand operation.

4. Prohibition of flammable materials

It is strictly forbidden to use or store flammable materials at the stand. This includes, among other things, open flames, candles, fireworks and easily flammable decorative materials.

5. Prohibition of eating at the stand

Eating food at the stand is not permitted. Please use the designated eating areas to eat your meals.

6. Compliance with general safety regulations

All exhibitors are obliged to comply with the general safety regulations of the trade fair and to ensure that their stands comply with the applicable regulations. This particularly applies to escape routes, fire protection and the handling of electrical systems.

7. Sanctions for violations

In the event of violations of these house rules, the organizer reserves the right to take appropriate sanctions. This can range from a verbal warning to exclusion from the trade fair.

8. Employees of visitors, accompanying persons and guests

Visitors, accompanying persons and guests of exhibitors are not authorized to perform activities for the exhibitors at the trade fair. The employment of persons who are not registered as official employees is prohibited.

9. Fire protection

In the event of a fire, materials used must not support the fire; all materials used must therefore comply with the B1 standard. If this is not the case, we ask that the materials be impregnated with fire protection impregnation spray (available online or from specialist retailers). Please also observe the general house rules of the Emslandhallen, which can be found on the Emslandhallen website under the general terms and conditions.

We thank you for your understanding and cooperation. Together we will ensure a safe and successful tattoo and beauty expo.
